Details on MatrixGold's Newest Software Update

It seems like yesterday we released MatrixGold in September 2018. Today, we're excited to announce the newest update, MatrixGold2019.3.

We have worked to ensure MatrixGold meets the needs of every jeweler within this ever-changing industry. We want MatrixGold to be the right choice for all jewelers to help them on this journey. Through designing, budgeting, presenting, and selling, MatrixGold can be your perfect ally on every stage of this beautiful journey, from the idea to the final piece.

Take a look at some of the new tools and improvements you'll find in the update on July 1.

Mesh Repair

Getting your designs ready for production is very important. With the Mesh Repair tool, all of the parts will come together for an easier print.

Texture 3D

Customers are gravitating toward having special finishes on their jewelry. This tool will help you achieve unique touches to any design to make it one of a kind.

Smart Pattern

Choose from more than 90 patterns and create spectacular designs with low weight.

Gems Between 2 Curves

This tool will boost adding stones in your designs. Choose the boundaries, select 2 curves, and fill all that area with stones. It's that simple!

Gems List on Curve

Often times, customers receive stones in different sizes to create a design. With Gems List on Curve, customers can add the stones to a design easier than ever.

Save as Default Style

Customers now have the option to save on each tool the customer defaults to. Set any measurement and layout, and save it to your default style. The next time you launch this tool you will have the same layout as a starter.

Signet Ring Side Profile

Take advantage of having more control when working on signet rings. The top side profile can now be viewed in this new version so users won't have any limits when creating signet rings.

Render

We have made a couple of big improvements in the render studio. Users will have the option to save their own materials and use the alpha channels to render the different materials by themselves and put them together later on any photo editing software.

Animation Studio

We now have new options on how the camera follows the path when making an animation to get different animation results.

With this new MatrixGold update, customers will have a powerful tool to boost their business either on the sales side or the production side; MatrixGold is the complete solution for any jewelry business that wants to be the forefront of the market needs.
