

How Stuller's CAD/CAM Services Makes Custom More Efficient

Whether it's because you don't have the equipment, the capacity, the know-how, or even just the desire, taking a jewelry design from your mind to something wearable can be immensely challenging. From sketch to CAD to model to cast piece and finishing, custom design is an intensive, all-hands-on-deck process.

But you don't have to do it all by yourself – because Stuller's CAD/CAM Services has your back and offers a variety of services for any design or manufacturing level you need.

4 Ways CAD/CAM Services Helps You

1. Submit a Resin/Wax Model

When you [submit a wax or resin model](#), our team will cast the piece so that you don't have to. Within one business day of receiving your model, we'll get back to you with a quote.

Alternatively, if you prefer to do the 3D printing yourself, you can send us a resin to cast as a semi-polished tumbled casting.

2. Submit a CAD File

Send us your CAD file, and we'll do the heavy lifting.

Similarly to the above, when you submit your CAD file, our team will cast the piece and grow the wax or resin as well. From there, we can manufacture it to completion.

3. Modify a Style

See a Stuller style that you like but need a modification?

Through [Modify a Style](#), you can request our CAD team make the changes to your specifications.

We can modify any Stuller design that has a CAD file, which will help you keep less live inventory in your store. You'll receive a quote and render within 24 hours.

4. Submit a Sketch

[Submit a Sketch](#) enables you to send in an image or drawing, and our CAD team will do the work for you. Once approved, we will take care of manufacturing all in one place.

Submit a Wax/
Resin Model

Starts at \$19.00

Submit a
CAD Model

Starts at \$99.00

Modify a
3C Style

Starts at \$149.00

Submit a Design
Sketch or Image

Starts at \$199.00

Center Stone Scan

Stuller is always working to raise the bar in creating and executing custom orders. We offer a complimentary 3D scan when you use one of our diamonds or gemstones for CAD/CAM orders. Processing orders can be done same day.

Easily Track Your Jobs

Once a project has been submitted, you can easily track the progress happening at our global headquarters. Head to the [My Projects](#) tab for a look at the progress. There, you can also resubmit jobs.
